

# Revised 14-Day HTML Learning Roadmap

This revised roadmap clarifies how projects from Days 4-7 integrate with earlier or later projects to create a cohesive learning experience. The final outcome is a comprehensive portfolio website developed on Day 13.

## Day 4: Lists and Tables

### - Application:

- Use lists to organize blog categories or navigation links in the blog homepage (Day 2).
- Create a table for a schedule (e.g., upcoming posts) or display data for the portfolio website.
- These elements can later be included in the Day 13 portfolio.

## Day 5: Forms and Input Elements

### - Application:

- Create a "Contact Me" form for the blog homepage (Day 2) or as a standalone project.
- This form will become a key part of the final portfolio website (Day 13).

## Day 6: Advanced Forms and Attributes

### - Application:

- Enhance the contact form from Day 5 with advanced validation (e.g., required fields, email patterns).
- Refine this form for better usability in the Day 13 portfolio.

## Day 7: Media Elements

### - Application:

- Embed an introductory video or audio into the "About Me" page (Day 8).
- Add media to the blog homepage (Day 2) or include a demo video of a project in the final portfolio (Day 13).
- These elements add interactivity and depth to the Day 13 portfolio.

#### Final Integration:

- All projects from Days 4-7 build upon or enhance earlier projects (like the blog homepage from Day 2 or "About Me" page from Day 8).
- These enhancements culminate in the polished personal portfolio website built on Day 13.

With this revised roadmap, each project feeds directly into the next, ensuring continuous learning and a cohesive final product.
